Preparing HR in the Electrical Sector in Batam, Polibatam Opens Applied Bachelor Program in Energy Generation Engineering Technology

January 20, 2023

POLIBATAM-Politeknik Negeri Batam Campus is always ready to provide graduates needed by industry in Batam City, Riau Islands Province. The field of electricity or energy generation is very vital for both household needs and industrial needs. Polibatam has now opened an Applied Bachelor Study Program in Energy Generation Engineering Technology.

Graduates of this study program are expected to have capacity in the field of evaluating, ations and maintenance of power plant units (power plant engineer). Grac s

are also able to monitor, analyze, and solve operational problems, as well as carry out maintenance on power plant units (power plant technicians).

In addition, graduates of this study program are able to prepare, run and analyze system stability, as well as operate substation equipment and electric power transmission (power transmission & distribution engineer). Graduates are also expected to be able to plan and implement maintenance standards, carry out maintenance, and analyze and solve problems in the electrical system (electrical technicians).

Job prospects for graduates of the Polibatam Applied Bachelor Study Program in Energy Engineering Technology include electricity generator supervisors, generator operation and maintenance technicians, operation and maintenance technicians for electric power distribution, electric power consultants, and electric technicians in various manufacturing industry utilities, building utilities, hotels, and industrial areas.

The various competencies of graduates of the Polibatam Applied Bachelor of Energy Generation Engineering Study Program are designed to be able to answer the challenges of electricity needs in today's digital era. These challenges include being able to plan and implement maintenance standards; carry out maintenance, analyze, and solve problems in power plants; be able to prepare, carry out, and analyze power flow studies, short circuit studies, and system stability; be able to operate substation and transmission equipment, maneuver the SUTM network, a SCADA system to control medium voltage network operations; and be able to correlate, diagnose, and conclude various problems in the management and handling of the field of electricity generation and distribution in accordance with generation regulations and electricity standards.

With these various competencies, many graduates of the Polibatam Applied Bachelor of Energy Generation Engineering Engineering Study Program are now working in the electricity industry in the city of Batam and the Riau Archipelago Province.
